

# **Larry C. Bernard**

**Professor Emeritus of Psychology | Psychological Science at Loyola Marymount University**  
Los Angeles, CA, US

Larry Bernard is an expert in evaluating people for the effects of traumatic injury, neoplastic disease and degenerative disorders in adults

---

## **Biography**

Larry C Bernard evaluates people for the effects of traumatic injury (sports injuries, concussion, motor vehicle accidents); vascular illnesses (strokes or aneurysm); metabolic illness (toxic exposures); physiological insult (hypoxia); infectious disease (encephalitis or HIV); neoplastic disease (brain tumor); educational and/or developmental disorders (ADHD, Learning Disabilities, Down Syndrome); and degenerative disorders in adults (multiple sclerosis, Alzheimer?s Disease). He helps clients, their families, and other professionals (attorneys, physicians) understand the cognitive, emotional, and behavioral consequences of these conditions. He does comprehensive evaluations and produce detailed written reports to document clients' precise level of cognitive and psychological functioning and prognosis with treatment recommendations. His goal is to help the client fully understand the extent of any impairment of cognitive functioning and its effects on their social and work life. Evidence from a neuropsychological evaluation can help people document their ability return to work in sensitive professions (aviation, medicine, police), demonstrate the effects of a personal injury to the brain.
