

Katherine "Kat" Collard, MS, RN-BC, NP

Chief Nursing Information Officer at ChristianaCare

Wilmington, DE, US

Katherine Collard is the chief nursing informatics officer at ChristianaCare, responsible for systems that directly impact nurses.

Biography

Katherine Collard is the chief nursing informatics officer at ChristianaCare, responsible for the strategy and implementation of IT systems that directly impact nurses. Collard led ChristianaCare's release of an innovative tool called Moxi, a collaborative robot that can assist in the hospital by making deliveries and performing other non-clinical tasks so that nurses and other clinical staff can spend more time caring for patients. She has also led teams in improving documentation for nurses particularly around pressure injury identification on admission. This process led to a significant improvement in identification on admission avoiding significant penalties. The team has been shared this across the United States and Cerner (now Oracle) has adopted the process for their standard content.

Areas of Expertise

Nursing Informatics, Technology implementor
